Your source for important information and specials in the Touch-Up Industry!

TIP OF THE MONTH

When applying our aerosols finishes on top of a water-based finish, the following is important to know to avoid the solvents from stripping the finish.

1. Apply at least 2-3 LIGHT mist coats allowing about 15 minutes between each one. This will create a protective barrier on the finish.
2. Once these barrier coats are dry, then the aerosol can be applied more liberally as you would normally.
3. Applying too much or even regular coats right away will likely react with or melt/strip the water-based finish.

AS THE WORLD CHANGES...

On April 26th, the Canadian Government announced that it is taking action to reduce emissions from chemicals, mostly Volatile Organic Compounds, that contribute to smog in consumer and commercial products such as paints, varnishes and adhesives.

Volatile Organic Compounds can be identified by their strong smell and are found in solid or liquid forms that evaporate very quickly, becoming a gas. They are the second largest contributor to smog in Canada, impacting millions of Canadians and the environment every day.

Here at DFP, we have already been working to improve our products and

make them more environmentally friendly. In fact, our recently introduced line of Trade Secret® Leather Care products are all environmentally friendly, water-based and biodegradable. As well two other new Trade Secret products which we are launching at the National Hardware Show in Las Vegas at the beginning of May, our Marker Pro Set and our Touch-Up System for Floors, are compliant with the coming regulations.

Over the coming months and years, we will be working to improve our products, such that they are not only the best Touch-Up and Repair products on the planet, but that they are all environmentally friendly.

DFP TOUCH UP SEMINAR

OCTOBER 4 & 5 IN MONTREAL AND OCTOBER 13 & 14 IN TORONTO.

PRODUCT SPOTLIGHT

AEROSOL SILICONE STOPPERS

Helping to ensure you only find fish eyes on fish!

Our line of Silicone Stoppers minimize the need to strip and refinish jobs that have been infected with silicone, saving precious time and money! Available in 3 popular sheens, they neutralise infected finishes allowing you to build a smooth, clear and fish-eye free topcoat! Do not topcoat with any another finish.

| Code | Description |
